

BMD software

Bilateral Meetings

- Friday 14:00-16:00

Description

BMD is an SME targeted to the development of novel biomedical software solutions. The company is grounded on the 20-years+ experience of its members on innovative biomedical applications, from bioinformatics to medical imaging. BMD founders have been conducting research within the bioinformatics group of University of Aveiro and the company assets are greatly based on that knowledge. BMD members have participated in several European projects in the past years, such as InfoGenMed, InfoBioMed (NoE), EU-ADR (FP7), GEN2PHEN (FP7), RD-CONNECT (FP7) and EMIF (IMI). Moreover, BMD is responsible by the software of the Portuguese Newborn Screening Program and the Portuguese Breast Cancer Screening Program. It is currently involved in following International projects: HEMOSPEC project (FP7-ICT-2013.3.3); MedBioinformatics (H2020 PHC-32-2014); and EUROLEISH-NET (H2020 MSCA-ITN-ETN). BMD engineering research team is highly complementary, with a strong background in medical imaging systems and networks, telemedicine, information retrieval, information extraction, biomedical data integration, visualization, and distributed applications, web systems and bioinformatics tools.
